

We claim:

1. A method of treating a patient suffering from cancer, comprising the steps of:  
preparing a Taxol infusion solution containing a concentration of Taxol sufficient to provide between 17.5 and 35 milligrams of Taxol per square meter of patient surface area per 24 hours, and  
infusing said solution into said patient over a period of time in excess of 24 hours.

2. The method of claim 1 wherein said infusing step occurs over a period of time of at least 96 hours.

3. The method of claims 1 or 2 wherein said cancer comprises a lymphoma.

4. The method of claims 1 or 2 wherein said cancer comprises a breast cancer.
